

One number smaller. But big in terms of success.

The Göpfert Boxmaker SRE Mini due to its extremely fast setup procedure, is the ideal machine for efficient production of short to medium runs. Without the need for special tooling the machine allows the manufacture of a wide range of products from the FEFCO catalogue and special designs. All necessary steps to make a ready to seal box from an untrimmed and non creased stock board are performed in one single board pass. This means scoring and trimming (both in longitudinal as well as in cross direction), slotting, die cutting, printing and stitch flap cutting.

Technical Data

Boxmaker Mini

max. working width:	1.400 mm
min. working width with manual feeding table:	300 mm
min. working width with automatic feeder:	400 mm
max. sheet length:	4.000 mm
min. sheet length with manual feeding table:	350 mm
min. sheet length with automatic feeder:	650 mm
min. slitting distance:	65 mm
thickness of slotting knife:	8 mm
min./max. board thickness:	Feinwelle bis Doppelwelle (1,8 – 7 mm) max. Pappenqualität 2.7
required air pressure:	6 bar
required quantity of air: SRE Mini	100 Ltr./Min. bei 6 bar
required quantity of air: with automatic feeder	ca. 400 Ltr./Min. bei 6 bar
